

**Specification**

Liquid medium used for the detection of indol production according to ISO standards.

**Formula \* in g/L**

Casein peptone..... 10,0  
DL-Tryptophan..... 1,0  
Sodium chloride..... 5,0

Final pH 7,2 ±0,2 at 25 °C

\* Adjusted and /or supplemented as required to meet performance criteria

**Directions**

Dissolve 16 g of powder in 1 L of distilled water. Distribute into tubes (5 ml) and sterilize in the autoclave at 121°C for 15 minutes.

**Description**

This broth allows indol to be produced from tryptophan, and therefore it is suitable for the differentiation and identification of coliforms from water and food. Its formulation is according to the German standards for waters and foods, and complies with the specifications of several ISO standards related to the presence and identification of *Escherichia*, *Salmonella* and *Shigella* in different products.

**Technique**

Medium is inoculated with a previously isolated culture, and then incubated at 37 ±1 °C for 24 ± 3 hours. Indol production is observed by adding a few drops (1 ml) of Kovacs' Reagent to the broth (with or without previous extraction) and shaking gently. Formation of a red ring indicates indol production.

**Quality control**

<b>Incubation temperature:</b>	37°C ±1,0	<b>Incubation time:</b>	24 ± 3 h
<b>Inoculum:</b>	≥ 10 <sup>3</sup> CFU (specificity) according to ISO 11133:2014/Amd 1:2018 & Adm 2:2020		
<b>Microorganism</b>	<b>Growth</b>	<b>Remarks</b>	
<i>Escherichia coli</i> ATCC® 8739	Good	Indol (+)	
<i>Escherichia coli</i> ATCC® 25922	Good	Indol (+)	
<i>Salmonella typhimurium</i> ATCC® 14028	Good	Indol (-)	
<i>Salmonella enteritidis</i> ATCC® 13076	Good	Indol (-)	
<i>Citrobacter freundii</i> ATCC® 43864	Good	Indol (-)	
<i>Enterobacter aerogenes</i> ATCC® 13048	Good	Indol (-)

**Storage**

For laboratory use only. Keep tightly closed, away from bright light, in a cool dry place (+4 °C to 30 °C).
